Technology licence

TURBULENCE PROBE GUARD

The Canadian instrumentation developer Rockland Scientific has licensed a novel probe guard designed at NOC for use on ocean gliders. The agreement gives Rockland Scientific the rights to manufacture and sell the guard to their worldwide customer base.

The probe guard is uniquely designed to protect highly sensitive turbulence probes that are deployed on ocean gliders, whilst minimising flow disturbance around the probes and maintaining the glider's delicate

ballasting. Designed by NOC scientists, the guard was subject to comprehensive testing, including field deployment and evaluation on a research cruise on board the RRS *Discovery*.

"Licensing the probe guard from NOC provided us with a well-designed and functional product, significantly speeding up the R&D cycle. Our customers are confident in the knowledge that the guard's design was extensively tested in NOC's field operations to verify minimal flow disturbance around the sensors."
