-------------------------	---

James Crease was one of the first scientists to join the National Institute of Oceanography on its foundation in 1949, and was a major contributor to the National Institute of Oceanography research in marine physics. He was leader of the Marine Physics Group from 1974-1986, which led to a wider interest in data management. In 1988 he retired from the Institute of Oceanographic Sciences, Deacon Laboratory, which was followed by a long collaboration with Ferris Webster at the University of Delaware on the management of data from the World Ocean Circulation Experiment.
