Allan B. Crawford MBE, Collection

Archive Location	Archive A – Individual Collections
-------------------------	---

Allan Crawford, born in 1912, studied engineering at Vickers-Armstrongs Ltd. in Barrow-in-Furness. On a visit to South Africa in 1937, he met a Norwegian scientist bound for Tristan da Cunha and joined his expedition as surveyor and his survey of the Island formed the basis for Admiralty Chart No.1769.

During World War II Tristan da Cunha became an important Royal Naval shore establishment and Allan Crawford was stationed there as a meteorologist for eighteen months. At the end of World War II he returned for a third time to take over the weather station on behalf of the civilian authorities. In 1946 he designed a set of stamps for the Island in an effort to introduce postal facilities to the island. Each stamp bore a value in potatoes, because there was not money locally. He was appointed by the Colonial Office as Honorary Welfare Officer for Tristan da Cunha, and his efforts were largely responsible for the repatriation of homesick islanders who had been evacuated to the UK after the volcanic eruption in 1961. He was awarded the MBE in 1962.

Allan Crawford donated his three sea temperature buckets. Together with his designs, notes, files and books with annotations/notes to the National Oceanographic Library Archive in 2006.

*The Crawford Sea-surface Temperature Bucket, invented by Allan Crawford in 1965, was designed to sample surface water and to measure sea surface temperature as accurately as possible. The Bucket has a bridle with keeps it at an angle of 45 degrees, and a rope tail to orientate the bucket in the water, ensuring that it scoops a sample of water correctly. A special tube allows free circulation of water through the bucket to prevent water from the previous sample remaining in the bucket. There is a flap which allows the thermometer to be read without removing it from the bucket.

Although most measurements of sea-surface Temperatures now come from satellites and buoys, observations are still made from ships using buckets to sample to surface water. We rely on such measurements to remove large scale biases in satellite measurements which can be caused by aerosols in the atmosphere, for example Saharan dust or volcanic particles.

*Acknowledgement- Dr Elizabeth Kent, NOC

Items	Box
Allan Crawford – bucket designs, notes and files	1
Folder - Buckets, thermisiters, design notes – sea-surface temperature bucket.	1
Folder - International Conferences 1956-1975, with notes and photographs.	1
Computer “Mouse” pad (Photograph of dwelling on Tristan da Cunha) with caption <i>Tristan da Cunha – South Atlantic Ocean.</i>	1
Folder – Tristan da Cunha by Allan Crawford – 6 photographs taken by Allan Crawford – Edinburgh Village 1961 – St Mary’s Church – Arthur and Martha Rogers – an Island House – an island family 1947. Plus copied diagrams (maps) and painting of an Albatross with Tristan Da Cunha in the background, mounted in green card. Sketch of “badge” format of Albatross and Tristan da Cunha mounted on green card. 4 copies (photocopy) of Tristan da Cunha map from the survey by Allan Crawford, 1937-38	2
